Novelties and Specialties in Vegetable Seeds

FOR 1910

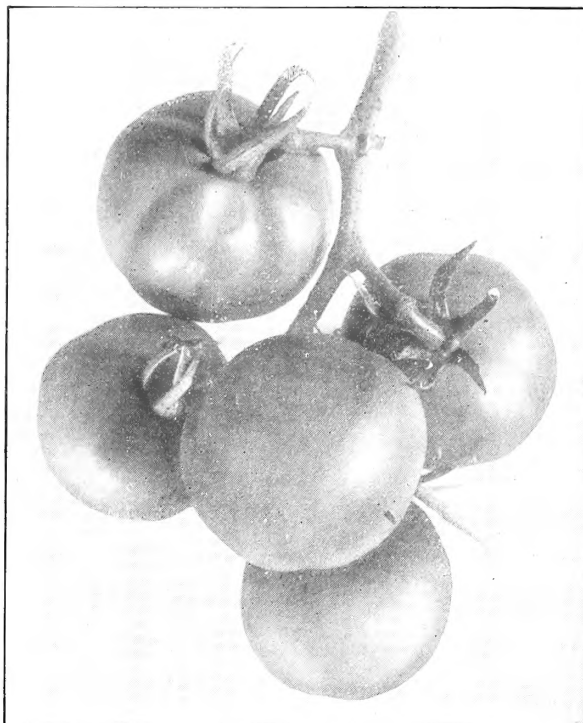

The Don Tomato

Extra Early Forcing

Notwithstanding the numerous New Tomatoes introduced in recent years, this grand variety, sent out by us, possesses all the qualifications to enable us to state that it is the Best Forcing Tomato ever offered.

The fruit is of medium size, dark red in color, very smooth, solid, and almost globe shaped. The plants form 3 to 6 stalks, and average 6 feet in height with comparatively very little foliage.

It is remarkable for its bearing qualities; the plants are covered with clusters of fruit averaging from 5 to 9 Tomatoes in each cluster, bearing right down to the bottom of the stems. It is also very valuable for first crop outside planting. Pkt. 25c.

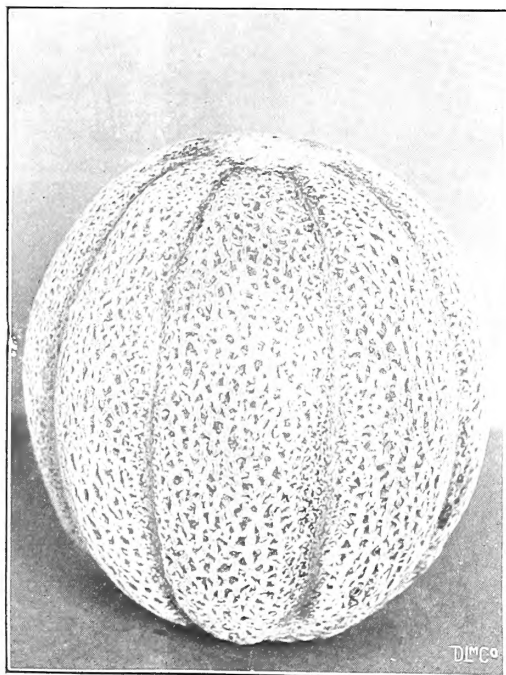

The Don Tomato

The Don

Extra Early Sweet Corn

This Sweet Corn has proved superior to all other early sorts. It is as early as the Cory, with ears measuring from 8 to 10 inches long. The grains are pure white, sweet and tender, and have from 10 to 12 rows on each cob. Our private gardeners claim that for large size, earliness and productiveness it has no equal. Pt. 20c., qt. 30c., pk. \$2.00.

Seth Low Musk Melon

W. & D.'s First and Best

Cauliflower

This is the earliest of all Cauliflowers. For forcing under glass during Winter and Spring, *First and Best* is peculiarly well adapted, from its dwarf growth and short outer leaves, and for this purpose no other Cauliflower is now so largely grown. Pkt. 50c., 1/4 oz. \$2.50, oz. \$8.00.

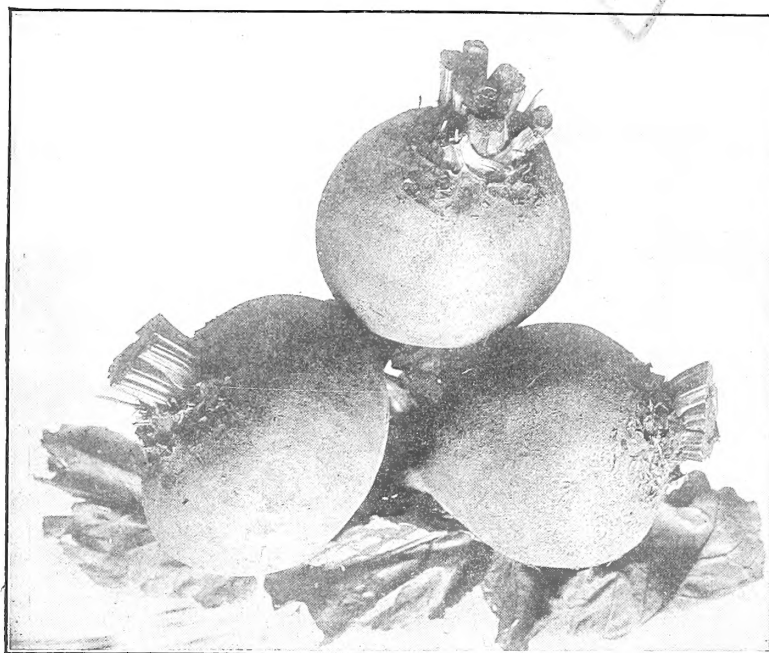

"Seth Low" Musk Melon

This excellent Melon, introduced by us last year, we can confidently recommend as one of the best varieties grown, and those of our customers who have tried it speak highly of its qualities both as regards flavor, shape, and prolificness. In appearance it is very attractive, nearly round in form, with greenish yellow skin, slightly netted, and deeply ribbed, averaging in weight from 7 to 10 lbs. The flesh is rich salmon color, very deep, with an unusually thin rind. We consider this variety a valuable addition, either for growing under glass or in the open, and as a Melon to answer both purposes it has no equal. Pkt. 15c.

New Burpee-Improved

Bush Lima Bean

The earliest, largest and the best of all Bush Limas. The sturdy bushes are all loaded with pods that are truly enormous in size. The luscious green beans are larger than any Lima ever known before. Pkt. 10c., pt. 30c., qt. 60c., pk. \$3.50.

Early Model Beet

Giant Snowhead Asparagus

An excellent new variety. Very tender, remaining white even if shot up high above the ground. Pkt. 10c., oz. 30c.

Early Model Beet

This variety will be highly appreciated both for forcing and growing outside. The shape is nearly round, and color of flesh a rich deep red. The quality is most excellent, being sweet, tender, and free from coarseness. The tops are quite small, making it a fine variety for forcing in hot-bed. Pkt. 10c., oz. 15c., $\frac{1}{4}$ lb. 40c., lb. \$1.25.

Half-Long Blood Beet

A distinct variety, and we consider it the best for Winter use. The flesh is rich dark red, very sweet, crisp and tender, never becoming woody. It retains its good qualities longer than other sorts. Pkt. 5c., oz. 10c., $\frac{1}{4}$ lb. 25c., lb. 70c.

Fordhook Bush Lima Bean

The only stiffly erect form of the popular Potato Lima

Resembles Dreer's Bush Lima in shape, but the beans are twice as large. The pods, which are borne in great profusion, contain three to five beans of great thickness and excellent flavor. Pkt. 10c., pt. 25c., qt. 50c., pk. \$3.00.

"Leviathan" Pole Lima Bean

This variety is the earliest yet offered. The pods which are produced in clusters are long, straight, and contain 4 to 5 good-sized flat beans, which are of excellent quality. It is a continuous bearer and can always be depended upon for producing a good crop. Pkt. 10c., pt. 25c., qt. 40c., pk. \$2.50.

Lazy Wife Pole Bean

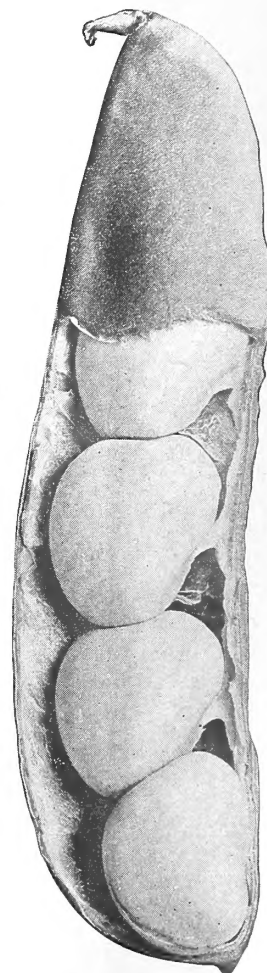

The pods are produced in large clusters in great abundance and are from 4 to 5 inches in length. Dark green, fleshy, and entirely stringless. The dry beans are pure white, excellent for winter use. Pt. 20c., qt. 35c., pk. \$2.25.

Stringless White Wax Bean

A large, white-seeded, stringless Bush Bean of strong, healthy growth, with handsome lemon-yellow pods, measuring from five to six inches in length and distinctly thick and meaty. The pods, borne abundantly, are handsome in appearance and entirely stringless. Pt. 20c., qt. 35c., pk. \$2.25.

The Hodson Wax Bean

This long-podded variety is a very rank grower; the plants grow about 30 inches high, bearing enormous quantities of long, handsome pods, of a waxy cream yellow color, and free from rus. Pt. 15c., qt. 30c., pk. \$2.00.

Fordhook Bush Lima Bean

Weeber & Don's Novelties and Specialties in Vegetable Seeds

W. & D.'s Brechin Castle Brussels Sprouts

This excellent variety has proved to be a decided advance on anything yet offered, and we have had numerous testimonials from our customers as to its value. The plants are of medium height, vigorous in growth, and entirely covered with solid dark green sprouts, very tender and of excellent flavor. Pkt. 25c.

Short Stem Drumhead Cabbage

This early Cabbage is remarkable for its dwarf, compact growth, and uniform heading. It has a very short stem, the heads appear to rest on the surface of the soil. It grows to a large size, and the outer leaves fold closely about the heads, which are very solid and of excellent quality. Pkt. 10c., oz. 30c., $\frac{1}{4}$ lb. \$1.00.

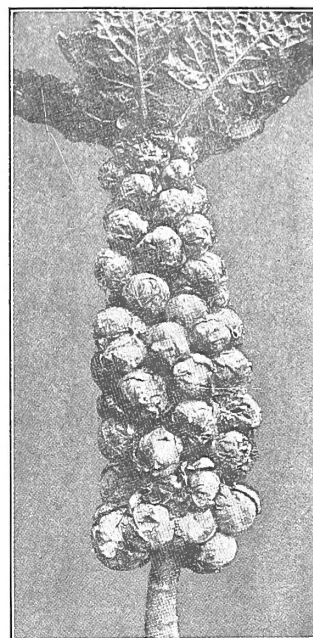

W. & D.'s Half-Long Forcing Carrot

Improved Jersey Wakefield Cabbage

The standard early variety, conical in shape, medium-sized heads, very solid and few outer leaves. The earliest and hardest heading of first early Cabbages. Pkt. 5c., oz. 30c., $\frac{1}{4}$ lb. \$1.00, lb. \$3.00.

The Volga Winter Cabbage

This new variety is a very quick grower, maturing fully two weeks earlier than other late sorts. The heads are uniform, and very solid, weighing from 10 to 15 lbs. each, and the flesh is firm, white and tender. The Volga is considered the hardest and best Winter Cabbage yet introduced. Pkt. 10c., oz. 30c., $\frac{1}{4}$ lb. \$1.00.

W. & D.'s Brechin Castle Brussels Sprouts

W. & D.'s Half-Long Forcing Carrot

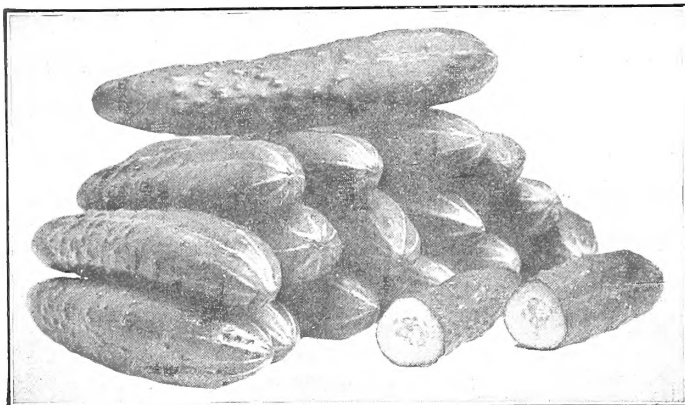

This half-long forcing Carrot is of medium size, dark orange color, with very little core. The shape is perfect; has very small tops, making it desirable for forcing or growing in frames. It is also a good variety for outside planting. Pkt. 10c., oz. 20c., $\frac{1}{4}$ lb. 60c., lb. \$2.00.

Dry Weather Cauliflower

This new Cauliflower is especially adapted for growing in dry locations, when other varieties fail. It produces large, solid heads. By the use of this strain, Cauliflower can be grown in many dry districts where it has been impossible heretofore to raise it. Pkt. 25c., $\frac{1}{4}$ oz. \$1.00.

A very valuable variety for main crop. It matures about five days earlier than Stowell's Evergreen and the ears are fully as large. The extreme whiteness of the grain makes it very attractive when served on the table, and the flavor is delicious. Pt. 20c., qt. 30c., pk. \$2.00.

The Davis Perfect Cucumber

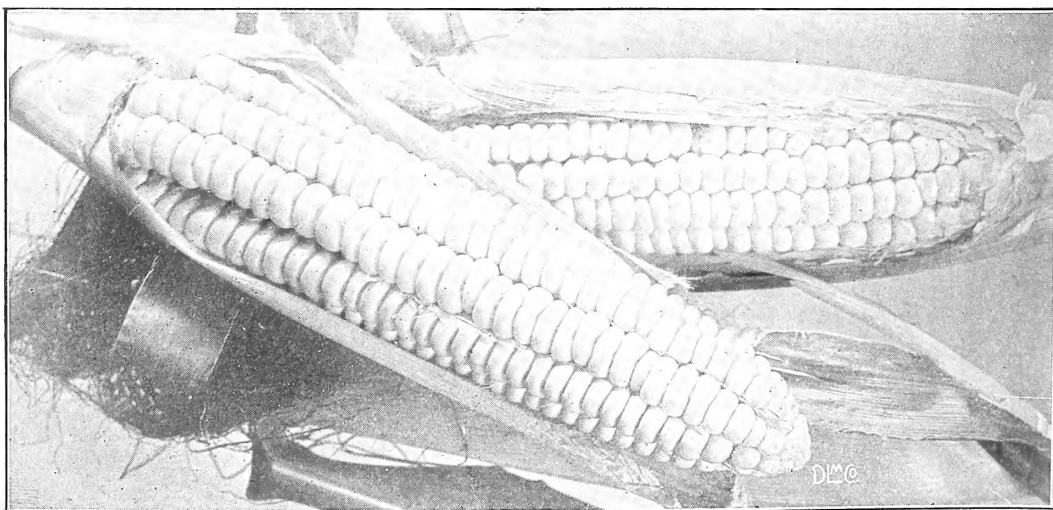

This variety is the best of recent introduction, both for forcing and growing out-of-doors. Shape slim and symmetrical; color dark, glossy green, with an average length of 10 to 12 inches. As a Lettuce for growing under glass, Ideal, in our opinion, is far ahead of anything yet sent out, and we have received most gratifying reports from customers who have already grown it. CELERY

German, *Sellerie*. French, *Celeri*. Spanish, *Apio*.

One ounce will produce 5,000 plants.

Sow the seed in the open border as soon as the ground can be worked. Plant in rows three feet apart, and set six inches apart in rows. If the weather is dry at the time of planting, care should be taken that the roots are firm in the ground. About the middle of August earthing up is necessary for blanching and whitening of that which is wanted for early use. After the soil has been drawn up against the plant with the hoe, it is further pressed close around each plant by the hand, firm enough to keep the leaves in an upright position and prevent them from spreading, using care to prevent the soil falling into the heart of the plant.

MUSHROOM SPAWN

German, *Champignon*. French, *Champignon*. Spanish, *Seta*.

Ten pounds will spawn 20 feet square.

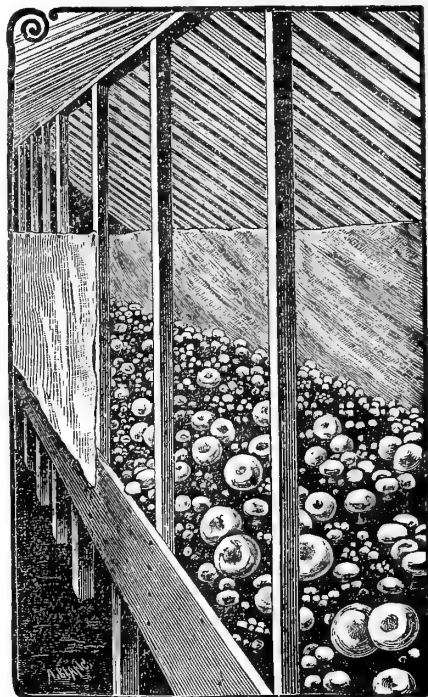

The Mushroom is one of the most profitable crops grown, especially in the vicinity of large cities, where the demand, at all seasons, is far in excess of the supply. Its cultivation may be carried on successfully in a cellar or shed during winter, or in the open air in summer.

Cultural Directions: Collect sufficient fresh horse droppings to form the desired size of bed, spreading them out in an airy shed to dry, and turning them frequently. When in a proper state as to dryness, which will soon be learnt by experience, make these into a bed from nine inches to one foot thick, beating them firmly together. If the droppings have been properly prepared, gentle fermentation will soon commence, and when the temperature of the bed is from 75 degrees to 80 degrees, with no danger of it rising higher, put in the spawn. This is done by making shallow holes about nine inches apart, inserting pieces of spawn about the size of a hen's egg and covering with the dung, pressing this closely about the spawn. It is of the greatest importance that the temperature of the bed should not decline below 75 degrees, nor rise above 80 degrees for a month after spawning. Within a fortnight after putting in the spawn, cover the bed about two inches thick with good, mellow, moist soil, making this firm; and if under this a covering one or two inches thick of cow dung, in about the same state as to moisture as the soil, can be afforded, this will cause the bed to last longer, and also to produce a larger crop than if covered with soil only. The most suitable temperature for beds in bearing is 50 degrees to 55 degrees and as a high temperature causes the mushrooms to come small, this should be avoided. Watering beds in bearing often causes the small mushrooms to damp off; therefore, water only when the bed ceases to be productive, and then use the water about the same temperature as the bed.

POTATOES

German, *Kartoffel*. French, *Pomme de Terre*. Spanish, *Patata*.

Ten bushels cut tubers will plant one acre. Seed Potatoes weigh 165 pounds to the barrel, net.

Our Seed Potatoes are northern grown and free from disease. It is our aim to have true, pure tubers, yielding heavy crops, and, above all, excellent flavor and quality when cooked. These are the chief points to be found in the sorts here listed.

The Potato, like all robust-growing vegetables, can be grown with varying success on soils of all kinds and in all conditions of fertility, but the soil best suited to it is a sandy loam. Manure is applied either in rows or hills, or broadcast over the hills and ploughed in—the latter in most cases being preferable. In highly enriched soils the plants are more liable to disease than when grown in soil that is naturally good. Plant as early in spring as the ground can be had in fair working order, in hills or ridges, about

NASTURTIUM

Beautiful free flowering annuals. They succeed best in a moderate good soil and produce their flowers in lavish profusion from 3 to 4 weeks after sowing until frost cuts them down in the fall. The Tom Thumb varieties are admirably adapted for bedding, forming neat, compact and bushy plants. The climbing sort grow to considerable height, but will need some attention in the way of tying, as they do not readily cling to support. Being natural ramblers they are most suitable for covering stumps, trellises, rockeries, low fences, etc. Nasturtiums have been greatly improved in the past few years, both in size of blossoms and variety of colors. We call particular attention to our mixtures of *Giant Flowering* sorts in praise of which we received a large number of unsolicited testimonials.

SWEET PEAS

Of late years Sweet Peas have been greatly improved in type, size of flowers and beauty of colors, adding very much to their popularity. The Spencer or Orchid-flowering type has appeared in many new shades, outclassing some of the standard sorts of similar colors by their large, bold and wavy flowers. The blooms, often measuring two inches across, are borne three and four on long, stiff stems. We have discarded many of the older varieties, to give place to the new and larger flowering sorts of similar colors, and the list offered below we can recommend with every confidence.

CULTURAL DIRECTIONS: Sow in the spring as soon as the ground can be prepared in a deep, rich soil and for succession until the middle of April. Open a drill 4 to 5 inches deep, and cover the seed from 2 to 3 inches. As the vines grow up, draw the soil up against them for support. A row of brush or wire netting should be placed between them for the vines to trail on. Pick flowers closely and do not allow to go to seed.

All working parts are of bronze, including plunger, gland, valves, valve seats and strainer. The Pump is regularly fitted with wing agitator similar to the one supplied with the "Pomona." The sprayer is held in place in the barrel by an adjustable clamp at the top, fitting over the end of a stave, and an anchor in the bottom of the barrel. The lever is long and powerful, making the work easy. The large air chamber makes it possible to get up a good pressure which will last for some time after pumping has stopped.

COMPRESSED AIR SPRAYERS

AUTO COMPRESSED AIR SPRAYER No. 1

This is without a doubt the standard of all Compressed Air Sprayers. It consists of a four gallon reservoir, made of heavy material, either Brass or Galvanized Steel as ordered. It is operated by working an Air Pump, with which air is compressed on top of the solution. A few strokes of the plunger will compress enough air to operate the machine several minutes and two pumpings will discharge all of the contents. This sprayer is made of heavy material throughout, and the Brass machine, which we strongly recommend, is practically indestructible, because it cannot be affected by the various spray solutions. No other Sprayer will do such a variety of work, and do it so well. The cut shows the Air Chamber and Reservoir, also Auto Pop Nozzle. Fill the Reservoir not more than two-thirds full with the solution, insert the air pump at the end of the can, and all is ready for use.

NEW BALL-BEARING LAWN MOWER "THE REGAL"

This is without a doubt the best Mower on the market. A common fault with Lawn Mowers generally, has been, that the drive wheels, having too short a bearing, get loose through wear. The drive wheels of the Regal are locked fast to the opposite ends of a steel shaft which is supported near its ends by ball bearings. The ball bearings are fitted with adjustable cones, by means of which the wheels can always be made to run true, no matter how much the machine is worn. **Net Prices:** 14 in., \$10.00; 16 in., \$11.00; 18 in., \$12.00; 20 in., \$13.00.
